

PERMANENT CONCRETE PROTECTION

DRYCRETE CURE SHIELD

EXTERIOR

WATER CURED CONCRETE RESULTS WITHOUT THE HASSLE!

DRYCRETE CURE SHIELD is applied at a coverage rate of 150-200 Sq. Ft. per gallon on broom finished surfaces and 200-300 Sq. Ft. per gallon on hard troweled floors.

DRYCRETE CURE SHIELD provides concrete a superior cure imparting greatly improved strength, surface hardness and impermeability, which translates to longer sustainable durability.

DRYCRETE CURE SHIELD leaves no surface residue to later interfere with surface bonding quality, which is very important when striping or applying a topical coating.

DRYCRETE™ Cure Shield is a water base colloidal silicate concrete curing agent that is an excellent alternative to standard water curing. DRYCRETE™ Cure Shield provides concrete with a permanent subsurface, specially formulated colloidal liquid precipitate barrier, while providing a porosity coating element, protecting the surface of the concrete against acid/salt attacks and damage related to freeze thaw cycles. The combined subsurface and surface moisture blocking elements allow for a greatly reduced rate of evaporation, and much improved hydration, density and greatly reduced permeability. DRYCRETE™ Cure Shield is an ideal cure for all exterior concrete.

Specs for 03300 & 09610 available to qualified Professionals.

ENHANCE CONCRETE TO IT'S MAXIMUM POTENTIAL!
