How to connect to Missouri Western State University Wireless with an iOS device. Last Updated: 6/18/2014

The following screenshots were taken from an iPad with iOS 7. Other iOS device settings can vary from device to device depending on version of iOS

Select **Settings** from the home screen.

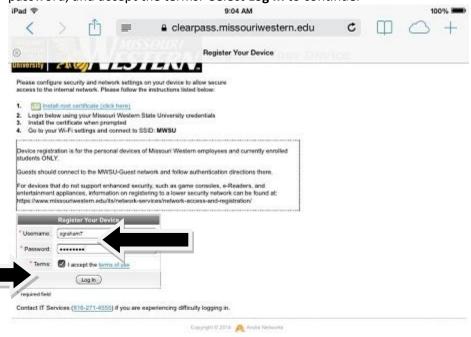

From the **Settings** screen select **Wi-Fi** and then select **MWSU-HowToConnect**.

Go back to the home screen and select Safari.

When Safari opens it should want you to **Register Your Device**, if it does not open to this page go to a different website and you should be redirected to this page. Enter your MWSU username. MWSU password, and accept the terms. Select **Log In** to continue.

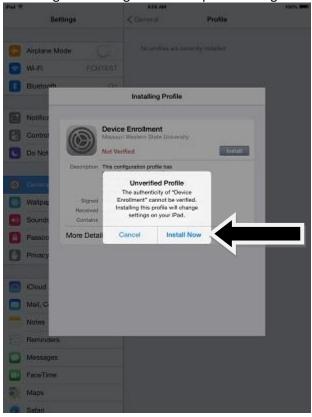

It will begin to register your device.

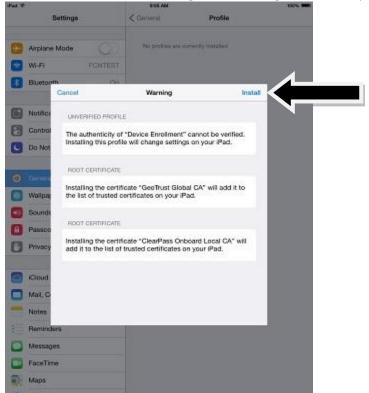

You will be prompted to install a configuration profile, select **Install** to continue.

You will get a message about the profile being unverified, select **Install Now** to continue.

There will be one more warning about it being a unverified profile, select **Install** to continue.

You are now finished installing the profile. Select **Connect** to connect to Western Wireless.

If the connect does not work you will need to go back into **Settings** from the home screen and then select **Wi-Fi**. From the **Wi-Fi** screen select **MWSU** and you will be connected to the Western Wireless.

If you need assistance, please come by the Information Technology Services department in Hearnes Center 110 or you can contact the Help Desk at (816) 271-4555.
